

# MEGA-DAN<sup>®</sup> MK II

**DOUBLET  
RECORD**

The function of the tube roller is to pack the soil and control the working depth. The roller packs the soil so that it gets more level and the moisture stays in the ground. The working depth is adjusted via a plate with holes and can be adjusted in working depths from min. 4 cm to max. 20 cm depth.

Mega-Dan has a transport width of only 3.00 m except from the 3.85 m rigid model.

The 3.00 m model can be extended with 1, 2 and 3 tine extension sets which gives new working widths of 3.85 m, 4.70 m and 5.50 m.
